

Profiles for external thermal insulation composite systems "ETICS"

W45

APU Metal Sheet Connecting Profile  
FIN-TEX

This profile is slipped over sheet metal joints (e.g. roof borders) resulting into a movable water-proof joint between the plaster and sheet metal due to its hollow chamber. The sheet metal's equalization movements are buffered by the profile which prevents cracks in the plaster. The achieved plaster/drip edge ensures well-directed water-guiding. The wall-side profile can be bent or shortened over the predetermined breaking line. The profile can be folded at the groove line into an angular profile (see next page).

The profiles are joined together with Plug Connectors Z13.

The metal sheet Connecting Profile W45 is made of plastic and equipped with a welded on fabric part.

Additional application capacities are in the base joint area of buildings.

**Available packed unit:**

25 bars of 2.00 m = 50.00 m  
incl. 25 Plug Connectors

For detailed information see technical information sheet or visit us on the Internet at [www.apu.ch](http://www.apu.ch).

## Application example

### Sheet metal Connecting Profile for roller shutters

**Z13**  
Plug Connector for fixing

### Base Rail joint
